SCRIPTED LFS 78
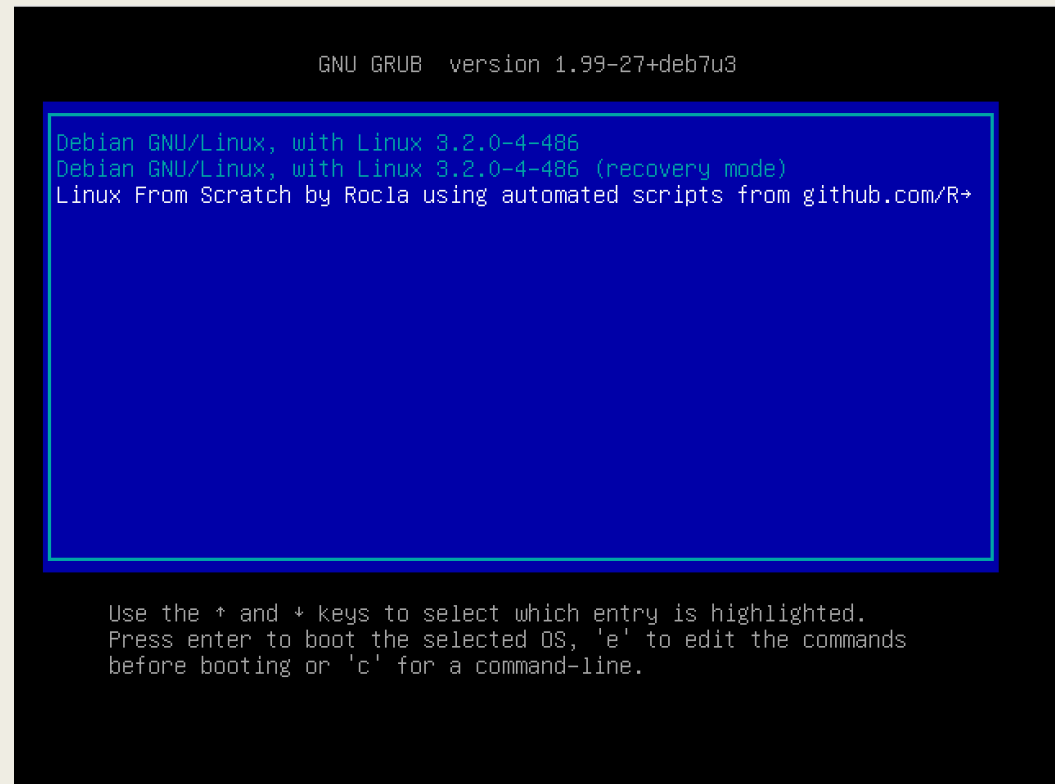

Romain Claret

github.com/Rocla/lfs-7.8

What is it?

```
              GNU GRUB  version 1.99-27+deb7u3

 Debian GNU/Linux, with Linux 3.2.0-4-486
 Debian GNU/Linux, with Linux 3.2.0-4-486 (recovery mode)
 Linux From Scratch by Rocla using automated scripts from github.com/R→

        Use the ↑ and ↓ keys to select which entry is highlighted.
        Press enter to boot the selected OS, 'e' to edit the commands
        before booting or 'c' for a command-line.
```

- Scripted version of the book LFS 7.8

- Running all the steps until the reboot of 9.3

- *English*

- *Details for each steps*

- Boot from the GRUB of the host machine

Host Machine

- ■ VirtualBox
- – *Host machine installer: debian-7.8.0-i386-xfce-CD-1.iso*
- – *Core: 1*
- – *Ram: 12GB*
- – *Host HDD: 40GB*
- – *LFS HDD: 20BG*

How to Start?

FRESH LFS RUNNING AS ROOT

Current State (changed)

- Clone the repo on your freshly installed debian

- Go to the folder (default: lfs-7.8)

- Give the permission rights to the first file (chmod +x 0.0-root_initial.sh)

- Run the first file (./0.0-root_initial.sh)

- Then you have the options to go

– *auto-pilot*

– *semi-auto-pilot*

– *sequential (script per script)*

The End

- ■ Tips:
- – *Do snapshots often!*
- ■ I love pull requests :)
